Heather Davis

Software Engineer

SUMMARY

Creative, detail-oriented, and hardworking Software Engineer with a proven track record of creating and implementing successful Web Applications, unparalleled googling skills, and a love for learning new things. I am a self-starter motivated by the process and ready to expand my knowledge and grow my skillset as part of a team.

WORK EXPERIENCE

Barista – Starbucks

June 2019 — September 2020

- Collaborated with a team of baristas to make and serve handcrafted coffees of all sorts.
- Memorized and implemented many recipes.
- Maintained a clean and orderly working environment.
- Connected with every customer in an effort to make their experience the best it could be.

Freelance/Contract Developer

May 2022 — Present

- As a Freelance/Contract Software Developer, I have built and maintained multiple websites of different sizes for a range of clients and businesses. Throughout these projects, I have focused all my efforts on writing clean and efficient code to create ease of use and editing of these websites, providing my clients with an easy-going experience, maintaining open lines of communication, and taking progressive feedback to ensure the final result is precisely what my client is looking for.

Recent Projects:

Hilltop Memories – A Front-End project displaying all of the information for HillTop Memories Event Center. The website includes an eye-catching gallery showing off the venue, all relevant information, an FAQ section, and a form that goes directly to the manager's email for contact.

Colleen Shannon – A website built using WordPress to showcase the work of a seasoned author. Colleen Shannon's website showcases her best single books, trilogies, and some of her screenplays. The style of the page embodies that of her old-school romance novels, so when you enter the site you truly are stepping into the world of Colleen Shannon.

Projects In Progress:

Snapshot – A full-stack website in which the user can take a picture of a product number or vin and upload the text directly to a database for inventory purposes using OCR. The technologies I am using for this project are HTML, CSS, Javascript, Tesseract.js, and MongoDB.
